## Software development in China

### Why outsource?

Hiring an offshore outsourcing company may be the solution to some of the problems your company is facing. Many software development companies are having difficulties finding qualified staff, managing projects and planning relatively simple but time-intensive maintenance-level work.

Outsourcing helps you to avoid peaks in the development cycle. It allows you to take on more application and software development work without having to significantly increase your budget by hiring additional staff.

### Why choose Lighthouse?

Lighthouse Software Europe is part of the Lighthouse IP Group and responsible for software development directed at the several companies within the group. Lighthouse Software China is a fully Dutch owned subsidiary, operating under Dutch management.

We offer you the following advantages

- China-based projects overseen by Dutch project managers.
- Significant experience in software development and large dataconversion projects.
- Development capacity of >2000 hrs/wk.
- Attractive hourly rates.
- 24/7 English language support

### Why outsource to China?

- China represents a strong outsourcing environment and has a fast-growing, skilled pool of IT professionals.
- Due to language requirements in schools, IT-professionals are English-proficient.
- Outsourcing to China becomes more appealing as labour costs rise in higher-demand markets such as India.
- Our staff in China is totally focused on your project, which results in reduced time to market and considerable savings.
